

Alpha's Quadband & EDGE Script

Hello Everyone,

Scared of doing the seem edits to enable EDGE or Quadband? Are you intimidated with Radiocomm? Well i came up with an easy solution, I created a script that does both in less then 2 seconds.

I believe this will help many people. 😊

Instructions :

Step 1 : Unrar the attached file using winrar or 7-zip. You will get the following file "Quadband & EDGE Script by Alpha.tcs"

Step 2 : Launch Radiocomm and wait for the green light.

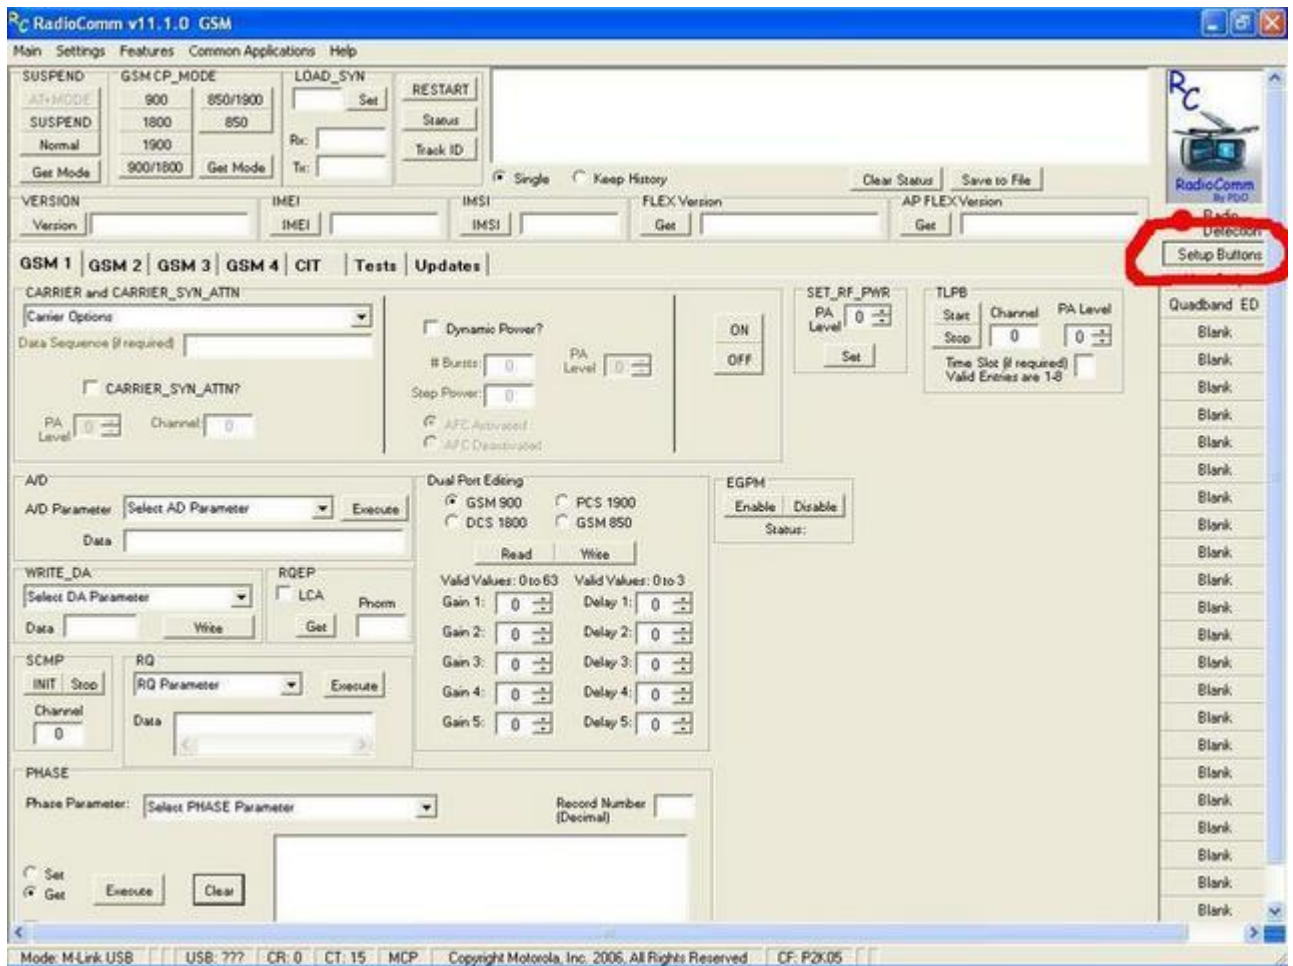

Step 3: Click on Step Up buttons (Shown in the Picture)

Step 4 : Locate the Script you extracted, type in a label like i did in the example below, make sure the script type is motorola p2k commands, and then click "SET" After that click the X on that window.

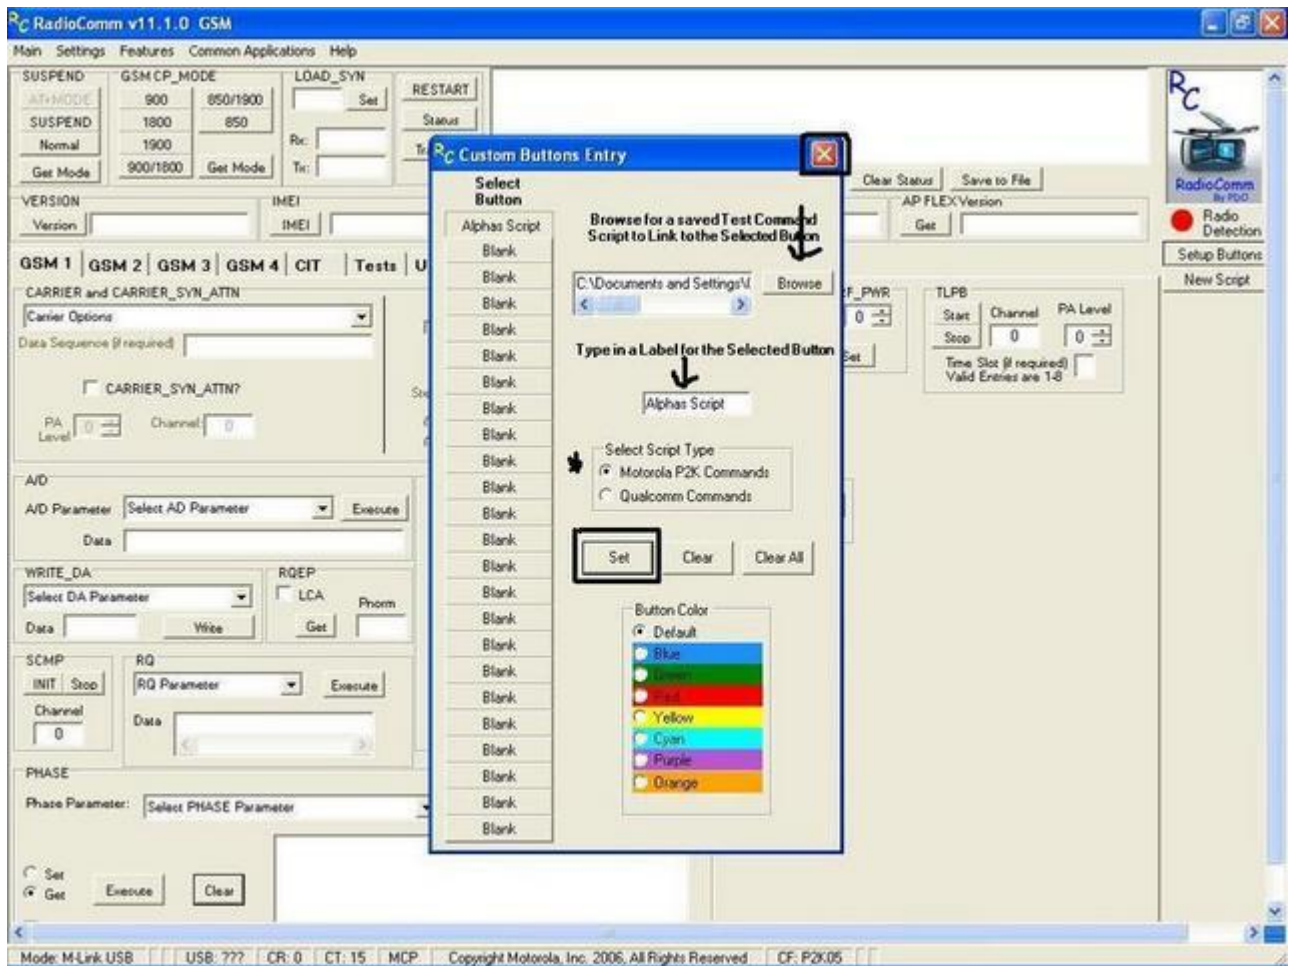

Step 5: Click on the button you labeled and then it should take no longer then 1-3 seconds and your done!

Step 6: Enjoy having Quadband and EDGE!

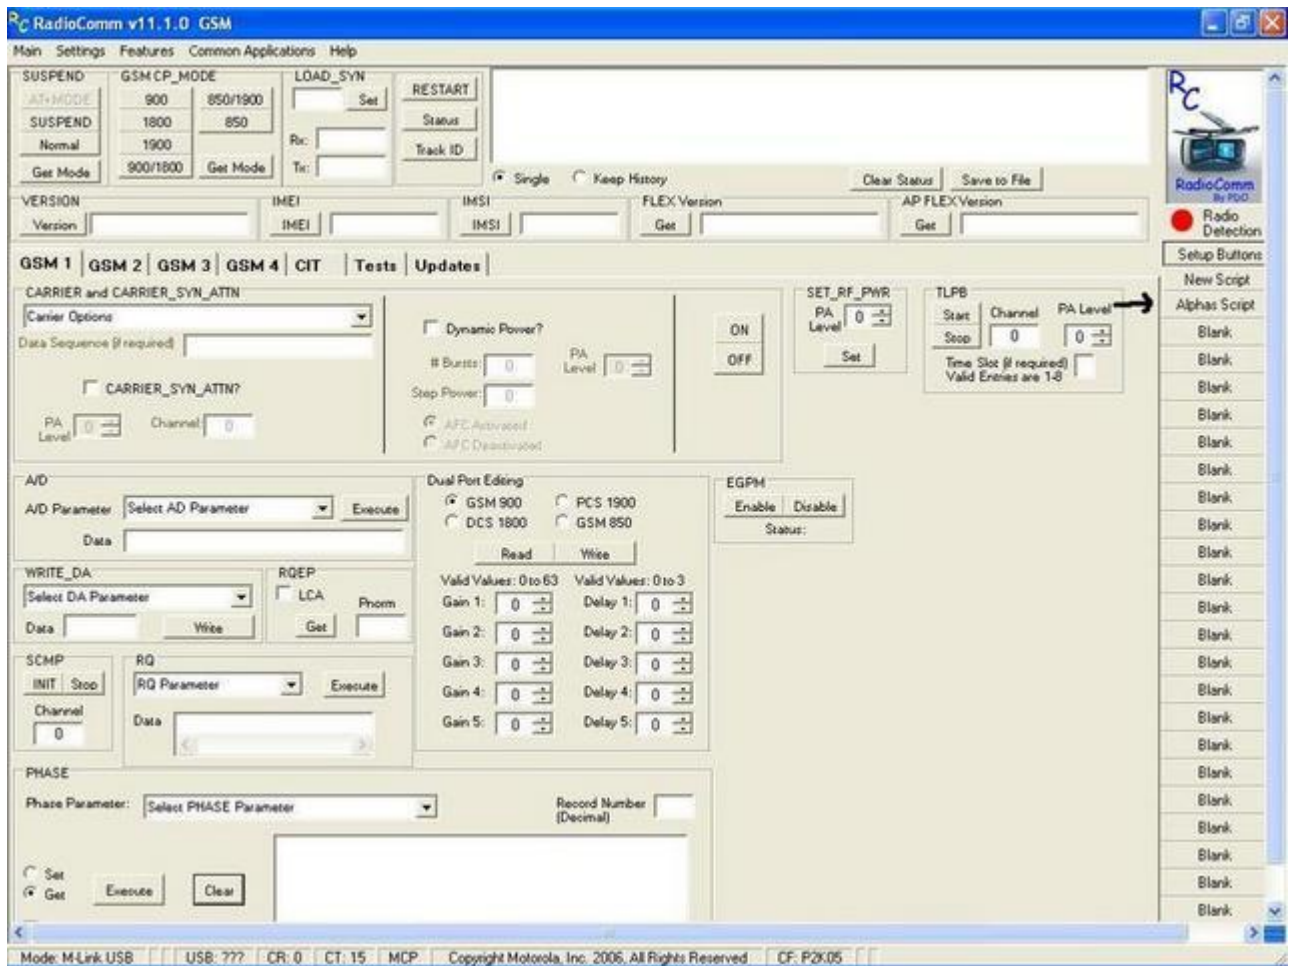

Picture for Step 3

Picture for Step 4

Picture for Steps 5 and 6

Good Luck Everyone!

Also i will be adding this as a reference point to my stickies i am making. Its a preview of what guides from me will look like.

~Alpha~
