Searching for a stealth parental control or employee monitoring software for Mac? **Perfect Keylogger for Mac** is what you need. This is the only Mac keylogger offering so complete set of monitoring features! It invisibly records keystrokes typed, IM chats (both ways), websites visited and makes screenshots. It also fully supports email notifications and can send all activity recorded by FTP or iDisk. This program would be useful for anyone who needs a stealth computer monitoring solution for Mac. More details are available at www.blazingtools.com/mac_keylogger.html

Start Menu for Mac OS X (freeware by BlazingTools Software)

Start Menu is a free software for Mac OS X which provides a simplified Start Menu functionality from the Windows world. You'll be able to browse the list of all installed Applications and run what you need with a single mouse click - like you do in Windows. Click the program icon to show the menu. Download www.blazingtools.com/mac/StartMenu.zip

Right Zoom for Mac OS X 1.63 (freeware by BlazingTools Software)

Right Zoom utility is created for people who don't like a default behaviour of green Zoom button in Mac OS X programs. This small program changes its behaviour, so a green button will always maximize your windows instead of inconvenient resizing. The program changes a behaviour of most used applications like Finder, Safari, MS Word/Excel/PowerPoint, Pages, Numbers. These applications are most annoying examples of inconvenient zoom button behaviour. You can extend the list with your own applications. You can also use **Command + Option (alt) + E** keys to maximize the current active window in most applications. You can set this Zoom button behaviour for all applications, just edit program options. The program wasn't tested it every application, so don't expect it to be ideal.

If you want to send a donation for this program, just buy any of our shareware tools (starting from \$10) at www.blazingtools.com

Installation: copy the program into *Programs* folder and run it. You will need to enter your Administrator password (in Mac OS X 10.5 and 10.6) to allow the program to interact with other applications. If you have Mac OS X 10.4, you will need to check «Enable access for assistive devices» checkbox in *System Preferences > Universal access* before using the program.

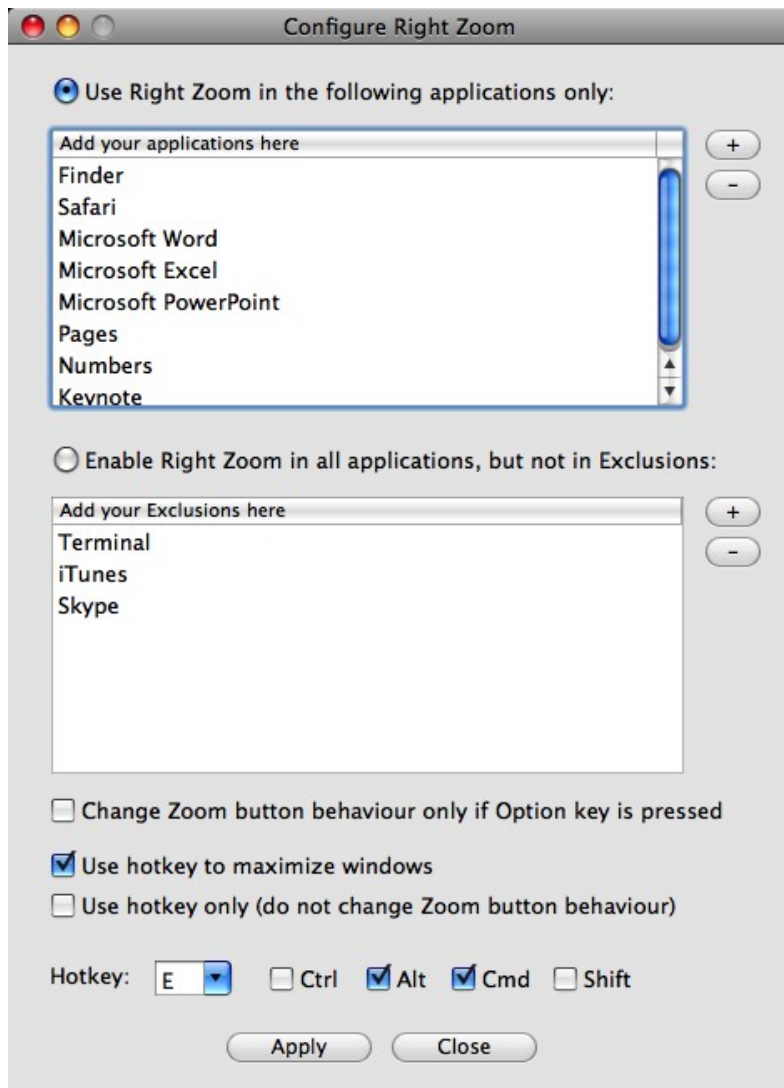

If you would like to use this program every time your system starts, open *System Preferences > Accounts > Login Items* and drag the program into the application list there.

The program runs without graphical interface and takes minimum of system resources. If you would like to stop the program, enter

killall RightZoom in *Terminal*, or close the program with **Utilities > System Monitor**.

Removal: just close the application and delete the program.

To change the program options, hold **Cmd** key and double-click  **Right Zoom** program icon.

<- Program options

Known limitations: if you click Zoom button in inactive application, Right Zoom may not work. Activate the application first by clicking its window title.

If you have more than one monitor and something is not working for you, please let us know.

Known bugs: if you'll find any problems with another applications while RightZoom is running, please report that to us.

You can add a problematic application

to Exclusions and it should be OK.
