# WEP870 BLUETOOTH® HEADSET

AWEP870JBECSTA | SPECIFICATION SHEET

SAMSUNG has united a premiere noise-cancelling Bluetooth headset for clear calls with the highly entertaining and hi-fi sounds of Stereo Bluetooth music streaming... all in one device. The result is the superhero of the headset world: the cleverly convertible WEP870.

Engineered with multi-connection technology, the WEP870 can be paired simultaneously with a Bluetooth handset and Bluetooth stereo device, such as an MP3 player or Bluetooth-equipped computer. Worn on the ear, the WEP870 operates in mono mode. Thanks to dual-microphone noise and echo cancellation technology, the WEP870 protects your calls from all noise distractions. In addition to crystal clear calls, you can also enjoy full-fidelity music streaming through the headset's earpiece.

If you prefer, the WEP870 allows you to listen to music the way it was intended with rich stereo sound. Simply attach the supplied stereo earbud lanyard and use the WEP870 the same way as any MP3. When a call comes in, the music simply fades away so you can answer, and you don't even have to remove the lanyard. The headset's microphone is engineered to point toward your mouth when worn on the lanyard, and the call can be heard through the stereo earbuds. When the call ends, the stereo music gently restores.

To prevent earbuds from dangling when not in use while ensuring the headset is securely suspended around the neck, the lanyard's design employs cable grommets. The slim, stylish, and user-friendly WEP870 includes an intuitive LCD, which displays battery level, call status, and Bluetooth connection status. With unique convertibility from noise-cancelling mono headset use to wireless Bluetooth stereo use, you get the best of two devices in one with the WEP870.

## TECHNICAL SPECIFICATIONS

- Dimension: 45L x 18W x 12H (mm)
- Weight: 12.0g
- Bluetooth Version: 2.1 + EDR
- HFP Version: 1.5
- HSP Version: 1.1
- Talk/Play Time: Up to 6 hours
- Standby Time: Up to 150 hours
- Dedicated On/Off switch

## STANDARD PACKAGE

- WEP870 Headset
- Detachable Crystal Ear Hook
- Stereo Earbud Lanyard
- Micro USB Travel Adapter
- User Manual

## Bluetooth Headset Pairing Instructions

1. When you turn on your Samsung Bluetooth headset for the first time, it proceeds into pairing mode immediately.
2. If you have paired the headset with other Bluetooth devices, make sure that the headset is on. Press and hold the Talk button until the blue indicator light stays solid blue after blinking.
3. Set your Bluetooth phone to discover the headset by following your phone's guide. Typically, the steps involve going to a 'Setting', 'Connection', or 'Bluetooth' menu on your phone and then selecting the option to discover Bluetooth devices.
4. Select the headset from the list of devices found by your phone.
5. Enter a passkey or PIN, 0000 (4 zeros), then press the Yes or OK key.
6. If pairing was successful, the indicator light will flash in blue 10 times rapidly before going to flashing every 6 seconds. If unsuccessful, the light remains on, and you will need to re-attempt pairing.
7. When you turn on your headset after pairing with the phone, the headset is automatically connected to the phone.
8. When you turn on your phone after pairing with the headset, the phone is connected to the headset by pressing the Talk button.

## Frequently Asked Questions

### What is the benefit of Bluetooth technology?

Bluetooth technology allows you to communicate with other Bluetooth-enabled devices without wires or careful alignment of devices, with nothing to hold or plug in, and with no distractions. You can be wire-free and hands-free with the confidence that your connection is secure.

### What is a Bluetooth profile?

Bluetooth profile is the definition of how Bluetooth-enabled devices communicate with each other and provide a single standard for manufacturers to follow. In order to connect and transfer data, the devices must employ compatible Bluetooth profiles for the specific activity, such as connecting sound, transferring data, etc. The types of activity a device can perform using Bluetooth technology depend on its profile. For a list of all available Bluetooth profiles log on to [www.myplanetbluetooth.com](http://www.myplanetbluetooth.com).

### Do all Bluetooth-enabled devices make use of all Bluetooth profiles?

How do I know which Bluetooth profiles each device uses? Your device will indicate on the packaging and feature list if it supports Bluetooth wireless technology. The device's user manual will list the profiles supported. Your sales associate can also walk you through the supported options and help you choose the best device for your activities and lifestyle.

### I can't get my phone to work with another Bluetooth-enabled device. How do I know if they're compatible?

To ensure compatibility between two Bluetooth-enabled devices, they each must support the same profile name (for example, HFP for a handset and headset). The technical specifications for your device, which are listed in the user manual or on the manufacturer's website, will let you know which profile names each device supports. For Samsung products, you can visit [www.myplanetbluetooth.com](http://www.myplanetbluetooth.com) for more information.

### Will my headset work with laptops, PCs, and PDAs?

Your headset will work with devices that support Bluetooth version 1.2 and higher. However, both Bluetooth devices must support the same Bluetooth profile(s).

### Will anything cause interference with my conversation when I am using my headset?

Appliances such as cordless phones and wireless networking equipment may cause interference with your conversation, usually adding a crackling noise. To reduce interference, keep the headset away from other devices that use or produce radio waves.

### Will my headset interfere with my car's electronics, radio, or computer?

Your headset produces significantly less power than a typical mobile phone. It also only emits signals that are in compliance with the international Bluetooth standard. Therefore, you should not expect any interference with standard consumer-grade electronics equipment.

### Can other Bluetooth phone users hear my conversation?

When you pair your headset to your Bluetooth phone, you create a private link between only those two Bluetooth devices. The wireless Bluetooth technology used in your headset is not easily monitored by third parties because Bluetooth wireless signals are significantly lower in radio frequency power than those produced by a typical mobile phone.

### How far apart can my Bluetooth devices be while still maintaining connection?

Typically, Bluetooth-enabled devices can maintain successful voice, data, and audio connections within a 30-foot range.

### Which Bluetooth devices does Samsung offer?

Samsung offers a full range of high-quality, lightweight, Bluetooth-enabled devices to enhance any mobile experience. These are described in the Featured Samsung Products section at [www.myplanetbluetooth.com](http://www.myplanetbluetooth.com).

“number one in brand loyalty seven years in a row”
